

# PLAYS WELL WITH OTHERS

ruby interacts

# New York Ruby Meetup

Rubyists talking amongst themselves

- we has a githubs

<https://github.com/nyc-ruby-meetup/playswell>

- Macruby - YES, this is a different Ruby VM, but it does allow you to write extensions and import Objective-C libraries <http://www.macruby.org...>
- Jruby - Again, YEST, this is a different Ruby VM, but again allows you to write and include Java Libs <http://jruby.org/...>
- RJB - A Ruby Java bridge, an alternative to Jruby if you just a bridge, not a different VM <https://github.com/ar...>
- Erlectricity - A Ruby Erlang bridge <https://github.com/mo...>
- Harmony - Javascript in your Ruby <https://github.com/my...>
- Hubris - A Ruby Haskell bridge <https://github.com/mw...> of course how can we forget this one since we can't stop hearing about Haskell from Matt just about every meetup :)
- system & shell (exec, ``, system)
- rubyinline (enjoy the power of C without the convenience of memory management)

- Rush, sure you could learn all the core process, session, et all libraries, or you could just do it with the ruby shell RUSH

<https://github.com/adamwiggins/rush> II <https://github.com/mjording/rush>

- Harmony, TheRubyRacer, and Johnson

<https://github.com/cowboyd/therubyracer>

<https://github.com/mynymml/harmony>

<https://github.com/jbarnette/johnson>

- rubyinline (enjoy the power of C without the convenience of memory management)

why talk to others ?

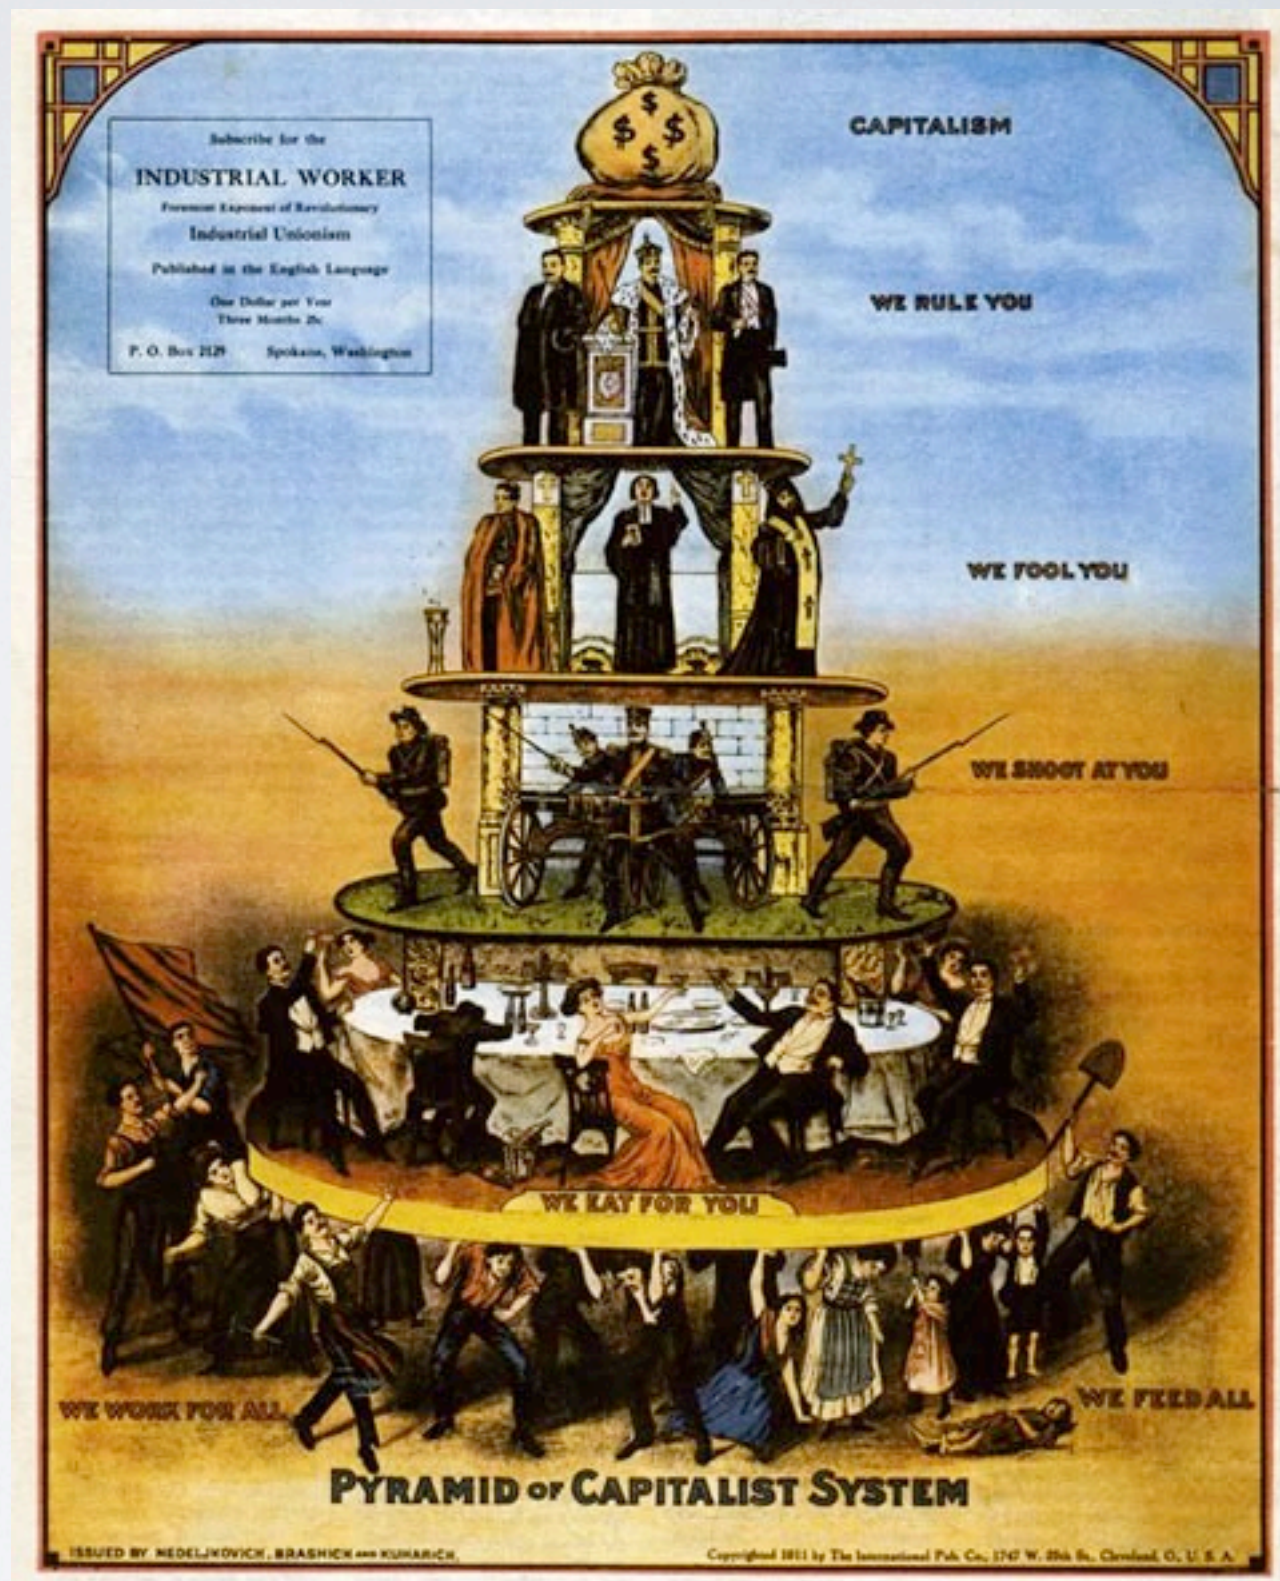

Playing to your strengths

the system
